- **Testing / Quality Assurance**: New developments are tested to make sure functionality and usability requirements are met. Tests may initially be performed on specific parts of the software, then transition to testing of an entire application and / or an end-to-end process flow between applications across the estate.
- **Change Management**: Preparing the end users for any functional updates that are to be delivered. This also covers upskilling any technical support teams that will manage the maintenance of the impacted software going forward.
- **Deployment**: The new version of software is deployed into a production environment, where it is accessible to end-users.

Hybrid Agile Project Delivery Lifecycle

An overview of the E2E process flow of delivering and individual piece of Demand through an Agile Project:

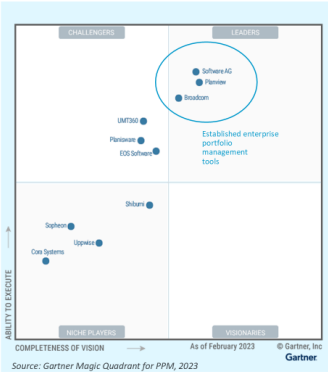
IMPLEMENTATION GUIDANCE

A suitable Project and Portfolio Management tool is recommended to support the implementation of the major technology demand management process



Source: Gartner Magic Quadrant for PPM, 2023

Established enterprise portfolio management alternatives			Established agile portfolio alternatives	
BROADCOM	planview	software AG	Recommended Jira Align	APPTIO
Broadcom's SPM product, Clarity, is deployed across a customer base of large enterprises, across multiple industries. Key features include Clarity's UI/UX which allows users to navigate several different portfolio views, sort and aggregate data and insights across a number of defined portfolio elements, and perform dynamic scenario modelling and analysis to manage investments at scale.	Planview's project portfolio management software enables leaders to optimise program and project portfolios, balance capacity against demand, prioritize work, focus resources, and empower teams to deliver. Key benefits include flexible capacity and resource planning, elevated prioritisation and funding, streamlined governance and better visibility.	Software AG's SPM product is Alfabet, and it offers Alfabet FastLane for customers embarking on their SPM journeys. Key strengths include the ability to support customers at varying levels of SPM maturity. The vendor also provides Alfabet Accelerator, which consists of preconfigured templates and additional SPM use cases at no/low cost to accelerate adoption.	Jira Align is an enterprise planning tool that connects Business strategy to technical execution. Compared to some of the other tools, JIRA Align is fairly lightweight, designed more for Agile operating models. Key strengths include real-time visibility across the entire enterprise, combined roadmaps across teams and portfolios and Jira's eider suite of tools including Confluence.	Target Process is Apptio's work and portfolio management tool. It helps teams to align strategy, product management, a team execution. Like JIR Align, it is fairly light-we compared to some of th other tools, designed m for Agile operating mod The tool is flexible and c be easily configured to meet Business requirements.

RECOMMENDATION RATIONALE:	Jira is a **highly flexible** tool, that can be configured to be anything from a lightweight application through to a highly sophisticated and complex toolset. It is **well supported** and **already in use in parts o** Jira can **support other processes**, for example change management, and the **wider tooling** (e.g. Confluence) can be used to complement the portfolio management function

4 PROJECT ACCELERATE IS
IS PORTFOLIO DEMAND MANAGEMENT PROCESS

Example Tooling Analysis

We've created a IS Request Portal to act as the single front door for our Divisions and Operating entities to log General and Specific requests into IS
